

VibeLens AI – AI-Powered Social Media Agent

Problem Statement

Brands, influencers, and organizations struggle to keep up with fast-changing social media trends, audience sentiment, and competitor strategies across multiple platforms.

Objective

Build an Agentic AI social media companion that analyzes trends, tracks sentiment, generates content, monitors competitors, and provides actionable recommendations.

Key Features

- Trend Analysis & Hashtag Discovery
- Sentiment Monitoring
- AI Content Generation
- Competitor Intelligence
- Smart Posting Recommendations
- Analytics Dashboard

Technologies

IBM Watson Orchestrate, IBM Granite Models, IBM watsonx.ai, IBM Cloud, Langflow, RAG, FAISS/Chroma, HTML, CSS, and JavaScript.

Role of Agentic AI

Autonomously analyzes social media data, predicts trends, generates content ideas, and provides proactive recommendations.

Novelty

Combines multi-agent intelligence, real-time analytics, predictive insights, and personalized recommendations in one platform.

Future Scope

AI content automation, influencer recommendations, crisis detection, multilingual support, and additional platform integrations.
